DEK DRAIN® UNDERSIDE®

DEK Drain® UNDERSIDE ECONOMY®: Using our original **DEK Drain®** panels, our **Economy** application is the easiest, quickest and least expensive installation of a water diversion system for **EXISTING DECKS**.

DEK Drain® UNDERSIDE ECONOMY® is installed to the bottom of the joists of an existing deck. The patented shape and pattern of the flexible **DEK Drain®** panels automatically forms the trough and pitch necessary for the proper drainage of captured water.

If a more finished appearance is preferred, **DEK Drain® UNDERSIDE EXTENDED®** is available with our exclusive **Joist Extender Rail** system. The Joist Extender Rails build down the deck joists approximately 4" so that the panels will not interfere with the installation of a flat, finished ceiling. Many choices of ceiling treatment are available and will affix in a flat, horizontal plane directly to the Joist Extender Rails. Ceiling material is site provided.

The Joist Extender Rail also provides an accessible dry chase for the installation of wiring for ceiling fans, lights, and stereo or TV cables. The rails can be oriented in either direction.
